SUMMARY

Software Engineering student with practical knowledge of DevOps, cloud infrastructure, and CI/CD, developed through hands-on personal projects. Built and deployed containerized applications on AWS using Docker, Kubernetes, Terraform, Helm, and ArgoCD, and implemented automated pipelines and observability with GitHub Actions, Prometheus, and Grafana. Strong foundation in Linux, infrastructure as code, GitOps, deployment automation, and monitoring.

TECHNICAL SKILLS

Cloud: AWS (EC2, VPC, S3, CloudFront, RDS, ALB, Auto Scaling, ECR, EKS), Azure

Containers and Orchestration: Docker, Docker Compose, Kubernetes, Amazon EKS, K3s, Minikube, Kind, Helm

Infrastructure and Configuration: Terraform, Ansible

CI/CD and GitOps: GitHub Actions, Jenkins, GitLab CI/CD, Azure DevOps, ArgoCD

Monitoring: Prometheus, Grafana, cAdvisor, PromQL

Systems and Development: Linux, Bash / Shell scripting, Python, JavaScript, Git, GitHub, PostgreSQL, MySQL

TECHNICAL PROJECTS

TaskOps - Kubernetes DevOps and GitOps Capstone

GitHub

AWS EKS, Terraform, Docker, GitHub Actions, Amazon ECR, Helm, ArgoCD, Prometheus, Grafana

- Provisioned and deployed a containerized application on Amazon EKS using Terraform, with Docker images stored in Amazon ECR and Kubernetes releases packaged through Helm.
- Built GitHub Actions CI pipelines, delivered releases through ArgoCD GitOps, and added Prometheus and Grafana for cluster and application monitoring.

LearnHub LMS - AWS Full-Stack Deployment

GitHub

AWS S3, CloudFront, EC2, RDS PostgreSQL, Terraform, Docker, GitHub Actions, AWS SSM

- Deployed a full-stack learning management system with S3 and CloudFront for the frontend, EC2 for application hosting, and Amazon RDS PostgreSQL for persistence.
- Automated infrastructure with Terraform and application deployment with Docker, GitHub Actions and AWS Systems Manager.

Jenkins Three-Tier CI/CD Pipeline

GitHub

Jenkins, GitLab, Docker Compose, React, Node.js, PostgreSQL, Linux

- Built a Jenkins pipeline for a three-tier application with checkout, build and Docker Compose deployment stages for React, Node.js and PostgreSQL services.
- Integrated Jenkins with GitLab and troubleshoot Linux deployment issues including Docker socket permissions, service startup and database initialization.

PulseOps - Application and Container Monitoring

GitHub

Prometheus, Grafana, cAdvisor, Docker, Docker Compose, FastAPI, PromQL

- Instrumented a containerized FastAPI application with Prometheus metrics and built Grafana dashboards for application health, request traffic and container resource usage.
- Used cAdvisor and PromQL for container observability and configured alerting rules to detect application unavailability during simulated failures.

EXPERIENCE

UI/UX Designer | Corvo Inc., Naxal, Kathmandu | 2023 - 2024

- Designed responsive website interfaces in Figma for freelance client projects based on business and usability requirements.
- Managed multiple design deliverables independently, incorporating client feedback and meeting agreed project requirements.

EDUCATION

Bachelor of Software Engineering | Nepal College of Information Technology (NCIT), Lalitpur | 2026
